GynoGrip

Application example

GynoGrip

Ready to use bandage for gynaecology and senology

The GynoGrip bandage is made of a permanently elastic compression tubular bandage and is available in 2 sizes. NEW: GynoGrip is washable at 30°C and the ends are folded and sewn (this prevents fibre debris from falling out and the edge from fraying). The bandage can be applied immediately and easily. The compression effect can be increased by the choice of size.

Exclusive distributor for miro-gynogrip: EHCT GmbH - Tel. +492262-7175-262.

Areas of application:

- As a bandage to relieve and support the muscles, e.g. in the abdominal area. Particularly suitable during pregnancy. Optimal for fixing the sensors during CTG examinations.
- For fixation after surgery in the breast area (to securely fix the primary dressing and/or the breasts).
